

Seesaw Overview

Seesaw is a digital portfolio tool. It allows teachers and students to post images, drawings, videos, and other examples of classwork so that parents can view and hear what their student is learning about in class. It serves as a great way for teachers to receive digital files from students and communicate with home about the work students are doing in class. With this app, students can submit images and videos from their camera roll, record audio explaining their thinking as they draw on their screen, and share links and notes with their teacher. Teachers can use Seesaw to communicate home with specific parents and all parents from their class.
